### **Akuter, Inc. Releases Updated eLearning Platform Software**

*Akuter Enterprise Version 4.0 Features New Intelligent Interactive Server Technology and Supports Emerging AICC and SCORM Standards*

**San Mateo, CA, June 11, 2002** — Akuter, Inc., an eLearning services company, today announced the general availability of AKUTER™ Enterprise version 4.0. The new release of Akuter's knowledge management system (KMS) extends the ability of Akuter to support non-standards-based legacy learning modules, increases the capability of Akuter's real-time session management and reporting, and delivers enhanced support for new training modules that follow emerging AICC and SCORM standards.

Ron Calandra, Akuter, Inc. CEO, said, "Our real-time software and services deliver what enterprise customers need most in an era of constrained capital spending – we protect their investment in existing eLearning content while providing industry-leading real-time session management and reporting. In addition, we support the current state of standards and APIs for eLearning content."

The Akuter Enterprise KMS is a comprehensive modular offering for corporations requiring enterprise-grade knowledge management services without the high costs and long implementation cycles of traditional enterprise eLearning systems. AKUTER Enterprise includes the following modules:

- AKUTER Management system, the core knowledge platform server with the following key functions:
  - Real-time eLearning with full tracking (instead of after-the-fact reporting)
  - Content management services,
  - Advanced student information system
  - Administrative information system for IT support personnel
  - Reporting and Analysis module, an open and customizable service that includes a rich set of reports and analysis.
  - Scoring Management, a real-time Assessment and Quizzing system
- AKUTER Intelligent Adaptive Server (IAS), advanced technology that delivers learning objects under the control of an intelligent server to approximate one-on-one learning advantage. IAS provides run-time and API support for emerging AICC and SCORM standards.
- AKUTER Author, a powerful authoring and content creation subsystem designed for use by a subject matter expert, without the need for technical support and Web programming.

The entire Akuter Enterprise platform has been designed for rapid implementation. Deployment can be completed in as little as one day, making the software extremely efficient for IT managers who need to balance the strategic goal of increased knowledge throughout the enterprise within today's constrained budgets and timeframes.

Availability of Akuter Enterprise V4.0 is immediate. All Akuter server-based software is supported on Sun Solaris, Linux, and Windows 2000 and XP. Implementations are supported using relational database technology from Oracle, SQL Server, Sybase, and IBM. Akuter services can be accessed from any browser-enabled PC.

### **About Akuter, Inc.**

Established in 1999, Akuter, Inc., <http://www.akuter.com>, is a privately held eLearning services company that creates systems optimized for rapid, cost-effective deployment. Unlike traditional eLearning providers, Akuter services are designed for government agencies and enterprises that require a comprehensive knowledge management solution that can help drive employee productivity immediately, without a large capital investment. Akuter customers include Swinerton, Granite Construction, Harland Financial Solutions, Goldendale, Visa, and Northwest Aluminum.

Akuter and Akuter Enterprise are trademarks of Akuter, Inc. All other trademarks are the property of their respective holders.
