

San Mateo, CA, January 6 2003

Akuter, Inc. announces the Release of Akuter Enterprise version 4.1:

In addition to performance improvement, there are 4 main new features in version 4.1

(1) Transparent real time project upgrade:

Project upgrade consists of replacing a version of a project to a newer version in every non-started instance where this project is used.

A new version of each curriculum using the upgraded project is created and will be used in any non-started assignment. In progress, passed and failed assignments will maintain the previous version. If the upgraded project was used as a prerequisite, the same rules apply.

(2) Screen skins:

Under the system administrator commands you can now choose a skin that will be applied to the different screens.

(3) Prerequisite status display:

When an assignment uses a curriculum that has a prerequisite, the prerequisite details and learner's actual status are displayed in the Learner's assignment list.

(4) Projects and Curricula versioning:

Projects and Curricula are tracked with their version #. For new curricula, only the latest version of an upgraded project will be available for inclusion in Curriculum or as a prerequisite.
