

San Mateo, CA January 10, 2005

Akuter announces the release of Akuter Author version 6.7 with the following new features:

1. New browser / platform support

Mozilla is becoming more and more popular and appears as the only significant challenger to MS IE. Akuter is adding Mozilla as a fully supported browser for eLearning content developed with Akuter Author. The learning objects created with Akuter Author will include all features for automatically recognizing what the user's browser and platform are and optimize the delivery for it. This process is transparent so it does not matter if users change machines between sessions. In addition of MS IE Akuter now supports the following combinations:

- Mozilla 1.2.1 / MAC OS 9
- Mozilla 1.7 / MAC OS X
- Mozilla 1.7 / MS Windows

2. Automated support for Realplayer, Quicktime, Windows Media Player

Akuter will automatically detect available players on the user's machine and select the best one for the media to play within the user's machine resources.

3. Support all media within the Graphic area

In addition of videos, Akuter now supports playing the following formats within the graphic area window providing a TV-like viewing of media within the page.

- Office documents (DOC, XLS, PPT)
- Flash animations
- External web resources

Of course, these formats can still be played full screen or within a popup browser window.

4. Support for semi transparent PNG graphics

This allows to support very nice blended effects on graphics or buttons.

5. Even faster course navigation

New transaction handling to increase the speed of navigation.

About Akuter

Akuter offers eLearning solutions for compliance and certification that is ideal for staff orientation, product training, health and safety and channels certification. We provide the technology that lets you develop and control all your contents for publishing and tracking over the Internet or your Intranet. Akuter Enterprise is a software ready to use that includes a development module based on MSWord and a Server application to organise your courses, curricula and assignments. A curriculum can have prerequisites and exams. Assignments can be made to individuals or groups. Each learner has a login information to access their personal portal where they can take their assignments. All learners' activities are tracked and can be reported through a set of pre-designed reports. You can also add your own reports. In addition, the product automatically provides alerts and messaging services that let you know of users' progress. It is very easy to use yet very powerful and sophisticated. Please have a look at our customers' testimonials on our website <http://www.akuter.com> .
